Why Hader?

Privacy the server enforces

Nothing is recorded outside a check-in or during a break, and keystrokes never are.

Open to the employee

Employees see everything about themselves that an admin sees, and who viewed their screen.

Numbers that hold

An approved month stays locked until it is reopened, and every change is logged.

Arabic and English

Screens, payslips and reports in both languages, with the labour rules of Egypt and Saudi Arabia.

Attendance and payroll in one place

A cloud system for companies in Egypt and Saudi Arabia

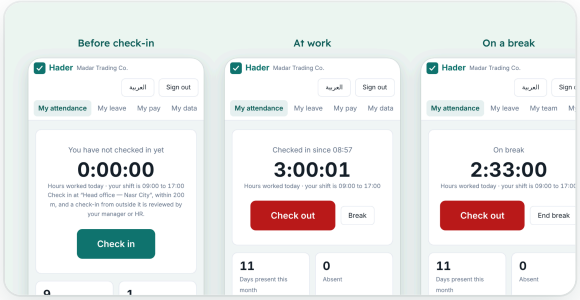

Web · Mobile · Desktop app · Fingerprint terminals

FADx

01

Attendance

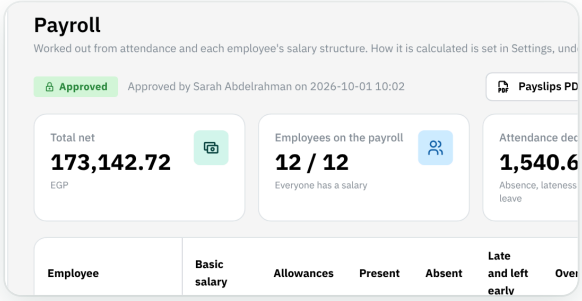

- Check in from the web, a phone, the desktop app or a fingerprint terminal.
- Branches with an area on the map: check-ins from outside it are reviewed or refused.
- Shifts, night shifts included, and a grace period before lateness counts.
- A live board: who is in, who is late, who is absent.
- Leave and correction requests go to the direct manager first.

02

Payroll

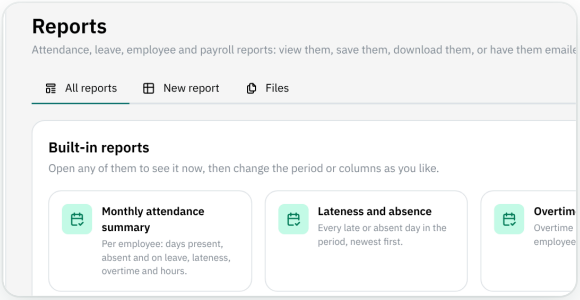

- A salary structure with allowances and deductions, and changes that start from a date.
- A monthly payroll worked out from attendance, and approval that locks its numbers.
- PDF payslips in Arabic and English, and a transfer file in your bank's format.
- Advances in instalments, deducted from pay automatically.
- End of service under Egyptian and Saudi rules, adjustable to your policy.

03

Admin & security

- Reports you build yourself, emailed on a schedule.
- Roles with detailed permissions, and two-step sign-in for admins.
- A log of who changed data, and who viewed sensitive data.
- A read-only API to connect your accounting software.

Integrations set up with our team

ZKTeco fingerprint terminals, single sign-on with Microsoft and Google accounts, online payment, Telegram and email.
